ENV Configuration EDIT

"sudo ENV plugin" integration provides custom UI for this configuration

← Integrations

Secrets

NOTE: Secrets are bound to account/team.

secret name	secret value	
		ADD
sudo_logo	*****	DELETE
team_name	*****	DELETE

Environment variables

Current project: zeit-sudo-example- SWITCH TO ACCOUNT VIEW

NOTE: For security, only secrets can be used for these environment variables.

variable key	variable value	
	choose from secret	ADD
TEAM_NAME	@team_name	DELETE

Hello process.env.TEAM_NAME !

1. andy@Andys-MacBook-Pro: ~/Projects/zeit-hack-sudo/example (zsh)

```
> Using project zeit-sudo-example-app
> https://zeit-sudo-example-app-5nzpl16cn.now.sh [v2] [802ms]
  api/name.js Ready [30s]
  λ api/name.js (33.87KB) [sfo1]
> Ready! Aliases assigned [33s]
- https://zeit-sudo-example-app.zeit-sudo.now.sh
- https://zeit-sudo-example-app-amazingandyyy.zeit-sudo.now.sh [in clipboard]
> now --scope=zeit-sudo --name=zeit-sudo-example-app --target=production example/git/master !

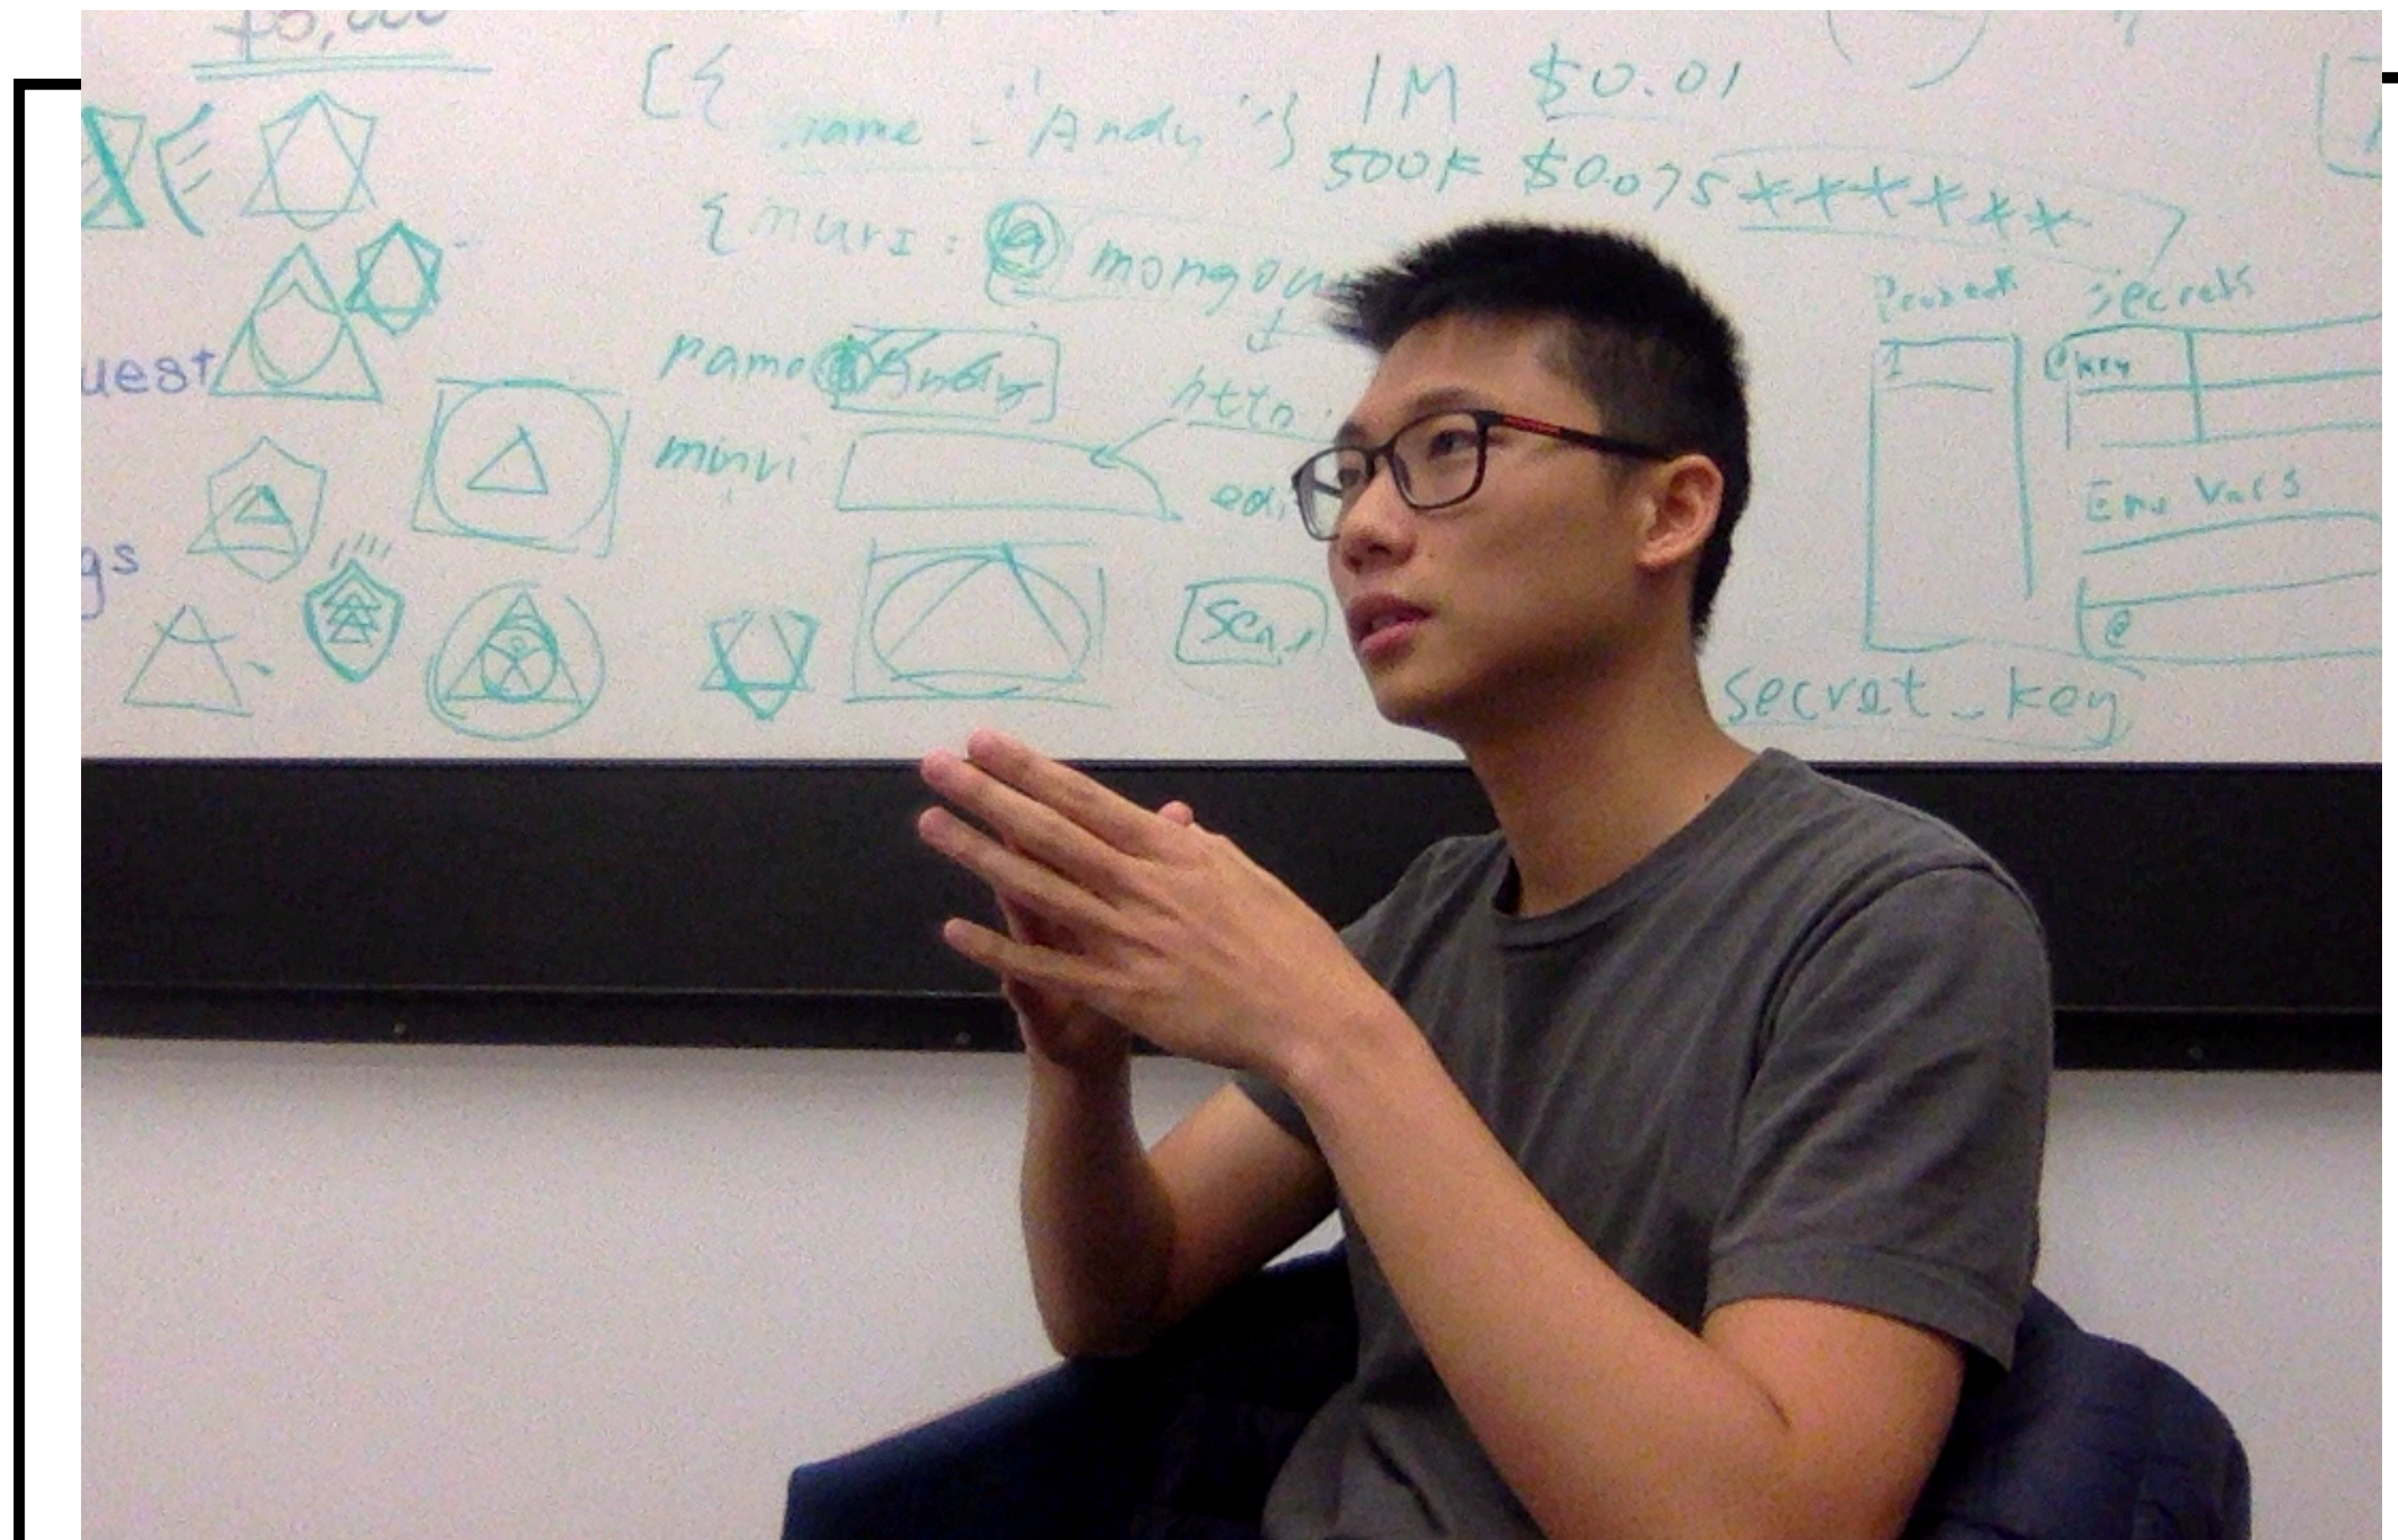

> WARN! You specified "--target production" but didn't configure a value for the 'alias' configuration pro
perty.
> Deploying ~/Projects/zeit-hack-sudo/example under zeit-sudo
> Using project zeit-sudo-example-app
> https://zeit-sudo-example-app-rngfwwhjl.now.sh [v2] [745ms]
  api/name.js Ready [22s]
  λ api/name.js (33.87KB) [sfo1]
> Ready! Aliases assigned [25s]
- https://zeit-sudo-example-app.zeit-sudo.now.sh
- https://zeit-sudo-example-app-amazingandyyy.zeit-sudo.now.sh [in clipboard]
> []
example/git/master !
```

What inspired
your team to build **sudo** ?

What inspired
your team to build **sudo** ?

ZEIT makes global deployment accessible to everyone.

**sudo wants to make secret management
accessible to every ZEIT user.**

sudo
